

3-point internal micrometer

IMICRO

Application

For high-precision measurement of through-bores, even at high measuring depths.

Execution

- Measuring faces made of hardened steel
- Friction coupling for consistent, repeatable measuring force
- Self-centring and self-aligning

Advantage

- Ground step taper for high precision
- Insensitive to influence of body heat from the user's hand and fluctuations in ambient temperature
- The only 3-point internal micrometer working on the Abbe principle

Delivery

In box

Art. No.	31695 006
Calibration Group	I
Min./max. length measuring range	5.5-6.5 mm
Error limit	4 µm
Vernier scale	0.001 mm
Measuring depth	25 mm
Measuring spindle increments	0.5 mm
DIN	863
