

Crash protection bollards

Application

For indoor and outdoor use. Crash protection bollards protect machines, pillars, columns, posts, shelves, (rolling) gates, loading ramps etc.

Four different cross-sections are available for moderate to extremely strong forces depending on the intended use.

The crash protection bollards L to XXL are especially suitable for critical areas: truck and forklift traffic, entrances, building corners.

If space is limited, we recommend the crash protection bollard S.

Execution

- Hot-dip zinc-plated
- For anchoring to floor slab
- Extremely high load-bearing capacity
- Extremely thick-walled
- Extremely durable bollard made from high-grade steel
- Art. no. 1087010 100-103: Plastic-coated in yellow, black painted strips
- Art. no. 1087010 200-203: White plastic-coated, red painted strips

Advantage

- Effectively prevents collision damage
- Safeguards inventory, transport routes and work areas

Delivery

Fastening material for anchoring is not included in the standard scope of delivery.

Technical Data

Product number	1087010 103
Material thickness	5.0 mm
Colour	Black-yellow
Surface	Plastic-coated
Type of assembly	To dowel
Area of application	Indoors Outdoors
Material	Steel, stainless
Manufacturer Part Number	199.19.146
Commodity Code	73089098
